

Environmental Policy

Mayers Fine Food is determined to be recognised as a proactive organisation within the environmental management and sustainability for ambient/cold supply chain and logistical activities in Australasia.

In order to meet this goal, Mayers Fine Food aspires to establish and implement industry leading practices in environmental management systems for their refrigeration, packaging, warehousing, distribution, international ocean freight logistics, local logistics and supply chain management.

For the company to be successful, it is essential that it takes its environmental responsibility and sustainability seriously by preventing pollution, reducing wastage, reducing demand on resources and reducing carbon dioxide emissions through continually improving its local and international logistics and supply chain operations.

Mayers Fine Food will develop, implement and maintain an environmental management system that drives continual improvement throughout all supply chain and logistics operations. To achieve this, Mayers Fine Food will ensure we:

- Comply with all legal requirements and all environmental initiatives that Mayers Fine Food are associated
- Identify, assess and manage risks posed to the environment by our operations
- Sourcing policy for greener assets and technologies
- Communicate this policy to all employees, contractors, suppliers and customers
- Regularly review our performances

This policy will be displayed in our offices, website and will be made available to all stakeholders

Brendan Healy
Director of Operations
